

Replit App Production-Readiness Checklist

Work through this before sharing your app outside your immediate team. Every item maps to a rule in the replit.md template.

Security

- Authentication rule added to replit.md
- User roles defined before any user-facing features generated
- Separate login credentials set for each service
- No secret keys written directly into the code
- External security review completed before public launch

Database

- Database migration rule added to replit.md
- Current data structure documented

Scalability

- App tested with two concurrent sessions
- File size and input limits set on all upload fields
- App tested on mobile before sharing

Cost controls

- Spending cap set on every external service
- Rate limits set on every external service
- Worst-case monthly bill estimated before launch

The replit.md file

- All rules added before the first feature generated
- File copy refreshed at the start of each session
- Live and testing environments separated
- File reviewed whenever a new feature breaks an existing one
